

VASCage GmbH is a research centre with a focus on clinical stroke research. With a strong team of internationally recognised experts, we develop new strategies and products for healthy blood vessels and stroke care. We improve prevention, diagnosis, treatment, and rehabilitation.

Our project „Functional Mitochondrial Diagnostics “ aims to develop protocols and quality management for high-resolution respirometry measurements as a diagnostic service. In your role as Technician you will collaborate closely with Oroboros Instruments GmbH.

Responsibilities:

- Respirometry measurements with HEK293 T cells and PBMCs by high-resolution respirometry
- Analytical measurements on biological samples: Cell count, protein content, spectrophotometric determination of enzyme activities
- Application, evaluation and development of protocols, software testing
- Data analysis
- Cell culture and sample preparation, production of buffers, chemicals and media
- Quality Control of instruments
- Ordering and stock maintenance
- Maintaining equipment records and work logs

Requirements:

- Completed training as lab technician or alternatively completed a university degree in biological sciences with lab experience
- Open-minded, creative and motivated personality with a proactive approach
- Flexibility & willingness to occasionally work weekends (compensated) when required
- Strong organizational and communication skills
- Self-reliant & attention to detail and careful working method
- Excellent interpersonal skills & Teamwork
- Proficiency in English

What you can expect:

- Exciting projects, challenges and a variety of activities in the job
- Flexible working hours
- Performance-oriented salary
- Teamwork in a highly motivated, interdisciplinary team

We look forward to receiving your full application documents per e-mail to
